

Say what the customer gets. Then prove it.

The homepage never states a benefit above the fold, hides its best proof, and skips both rebates. Below: what competitors on the Border say, what the ACCC and the NETCC let you claim, and paste-ready copy for every section.

Prepared 12 September 2026 · Site: WordPress + Elementor · Fonts kept as on the live site (Saira Condensed / Roboto)

WHAT THE CHECK FOUND

Proof exists. It just isn't on the page.

4.8 / 5

SolarQuotes rating, 26 reviews. Not shown anywhere on the site.

0

Savings, rebate or trust figures visible above the fold.

6th

FAQ accordion is the first place a savings number appears.

2

Open rebates never mentioned: federal battery discount, Solar Victoria \$1,400.

- **The H1 is a brand slogan.** "Powering a Sustainable Future" tells a Wodonga homeowner nothing about their bill. The first paragraph is about the company, not them.
- **The one savings claim is "50% to 100%".** "100%" implies a zero bill, which only a large battery and light evening use deliver. It is the claim most likely to draw an ACCC complaint.
- **NETCC Approved Seller, in-house CEC electricians, Tesla / Sungrow / SigEnergy / BYD / Fronius / Enphase.** All true, all absent from the homepage.
- **Typos and slugs.** "from design, from installation"; FAQ answer starting "es. Solar"; the "Why Locals Choose CES" link goes to */clean-energy-solutions-book-online/*; the batteries page lives under */heat-pumps/*; the batteries page shows "times more energy 0" three times.

MARKET RESEARCH

How the competition words it

COMPANY	HEADLINE SAVINGS CLAIM	PROOF PLACED NEXT TO IT
Stag Electrical Albury-Wodonga	"\$1,000 to \$2,200+ per year", payback "3 to 6 years"	18 yrs · 10,000+ installs · 4.8 Google (100+) · 25-yr workmanship guarantee
BVR Energy Wodonga	"Cut your electricity bills by up to 50%"	25 yrs · 15,000 panels · "\$3 million saved annually"
KDEC Albury-Wodonga	Customer stories: "\$400+ quarterly bill down to \$70"	32 yrs · 18,689 projects · NETCC signatory
Zip Solar national	"Slash your power bills by up to 80%" (business: up to 70%)	150+ five-star reviews · NETCC · 25-yr panel warranty
CES today	"50% to 100%", FAQ only	Nothing on the homepage

Dollars beat percentages

The two strongest local pages lead with dollar figures or a real bill. A percentage asks the reader to do maths on a bill they don't remember.

The claim never stands alone

Every strong competitor puts payback and a trust number in the same viewport as the savings claim.

Name the place

Stag's subhead is "Built for Border Climate Conditions." Albury-Wodonga in the H1 helps search and trust at once.

2026 benchmarks you can cite. A 6.6 kW residential system saves \$1,200 to \$2,000 a year on its own. A battery adds \$800 to \$1,500 on top. Typical payback is 3 to 6 years. (Stag Electrical, Set Solar, Green.com.au, Ecogeneration, all 2026.)

COMPLIANCE

"Save up to X%" is fine, on three conditions

- **Australian Consumer Law, s18 and s29.** An "up to" figure is judged by the overall impression on a reasonable consumer. If only a handful of customers reach the top figure, it is misleading. Drop "up to 100%".
- **New Energy Tech Consumer Code.** CES is an Approved Seller. The Code, re-authorised by the ACCC on 28 August 2026, requires savings claims to be "reasonably based and, where available, based on reputable sources." Keep a one-page substantiation note on file (section at the end of this page).
- **Qualify it in the same viewport.** One line under the headline naming the system size, tariff year and that results vary. Not in the footer.

Recommendation. Lead with "up to 80%", support it with the dollar range and payback, and swap in your own installed-customer average once you have 12 months of monitoring data from 20 or more systems. "Our customers save" beats any industry figure.

THE REWRITE

Before and after, section by section

CURRENT META <i>Clean Energy Solutions - Powering a Sustainable Future</i> <i>Clean Energy Solutions are powering a sustainable future with over a decade of experience in solar energy. Family-owned and passionate about sustainability.</i>	NEW META Title: Solar & Battery Installers Albury-Wodonga Clean Energy Solutions Description: Cut your power bill by up to 80% with solar and batteries designed and installed by our own local electricians. Family-owned, NETCC approved, rated 4.8/5. Free quote: (02) 6021 2000.
--	--

Why: the title now carries the search phrase people actually type and the location. The description carries the benefit, the proof and the phone number.

CURRENT HERO <i>Powering a Sustainable Future</i> <i>At Clean Energy Solutions, we're not just another solar energy company—we're a family-owned business with a deep-rooted passion for sustainable living and over three decades of collective experience in the solar industry.</i> <i>[Go solar today]</i>	NEW HERO Cut your power bill by up to 80%. Solar and battery systems for Albury-Wodonga homes and businesses, designed and installed by our own local electricians. Most customers save \$1,200 to \$3,000 a year and pay the system off in 3 to 6 years. Get my free quote Call (02) 6021 2000 Savings based on a typical 6.6 kW system with 2026 Victorian tariffs. Your figure depends on your usage, roof and system size. We'll calculate it from your actual bills before you decide anything.
---	--

Why: benefit first, place second, proof third, all in one screen. The qualifier line is what makes "up to 80%" defensible.

CURRENT TRUST BAR

None.

NEW TRUST BAR, DIRECTLY UNDER THE HERO

Rated 4.8/5 on SolarQuotes

NETCC Approved Seller

Our own CEC-accredited electricians

Family-owned in Wodonga since 2009

Tesla · Sungrow · SigEnergy · BYD · Fronius ·
Enphase

Confirm the "since" year against the business registration. Daniel entered the industry "over 15 years ago", so 2009 to 2011 is likely.

Why: every competitor with a strong page puts these within the first scroll. CES has all five and shows none.

CURRENT REBATES SECTION

None.

NEW REBATES SECTION

Two rebates are open right now. One of them shrinks every six months.

The federal Cheaper Home Batteries Program takes around 30% off the cost of a home battery, applied at the point of sale. The discount steps down on a fixed schedule, so the same battery costs more each time it does. Victorian owner-occupiers earning under \$150,000 can also claim up to \$1,400 off panels through Solar Victoria, plus an optional \$1,400 interest-free loan.

We handle every application and every piece of distributor paperwork. You just pay the reduced price.

Check what I'm eligible for

The Solar Victoria rebate applies on the Wodonga side only. Albury customers get the federal STC discount and the battery program but no state panel rebate. Say so plainly for NSW visitors.

Why: the battery discount stepping down is the only honest urgency in the market right now. Use it.

CURRENT ABOUT

We're Bree and Daniel, the husband-and-wife team behind Clean Energy Solutions, supported by our dedicated staff and in-house electricians. Daniel is a qualified electrician and solar installer who entered the industry in its earliest stages over 15 years ago... Together, we offer more than 30 years of combined experience in solar and electrical work.

(three more paragraphs on removing confusion and building confidence)

NEW ABOUT

Meet the people who'll actually be on your roof.

We're Bree and Daniel Grubisa. Daniel is a licensed electrician who has been installing solar in the Border region for over 15 years. Bree runs the design side: she'll visit your home, read your bills, and design a system around how you actually use power. Our electricians are on our payroll, not subcontracted, so the person who quotes you and the person who installs it work in the same building.

Solar isn't complicated once someone explains it properly. That's the job we take most seriously.

[Book a site visit](#)

Why: four paragraphs become two. "On our payroll, not subcontracted" is the concrete claim the old copy was circling.

CURRENT "WHY CHOOSE US" CARDS

Solar Made Simple. *No being bounced around. You'll be supported by our local team, with each step guided by the right person — from design, from installation to aftercare services.*

Solar Made Custom. *Every system is designed for your roof, your energy use, and your budget...*

Solar Made Smart. *With the latest technology, you can track your system's performance and savings in real time...*

NEW CARDS

What you get with CES that you won't get from a call centre

One team, start to finish

Bree designs it. Daniel's crew installs it. The same people answer the phone afterwards. No handballing, no "I'll have to check with the installer."

Sized to your bills, not a package

Every system is designed from your last four quarterly bills, your roof, and what's coming next: an EV, a battery, a pool. You'll see the expected output and savings before you sign.

You'll see the savings live

Every system comes with an app that shows what you're generating, using and exporting in real time. We'll set it up on your phone before we leave.

Why: the same three ideas, each now ending in something the customer can picture. The "from design, from installation" typo goes with it.

CURRENT PROOF SECTION

One testimonial (Lois Nolan) on a separate page, no rating, no link to reviews.

NEW PROOF SECTION

What Border locals say

"We have been in credit over the last 4 to 5 months so couldn't be happier."

"The only provider in town that bothered to quote in a timely manner."

"A professional and very seamless process from start to finish." — Lois Nolan

Link under them: "Read all 26 reviews on SolarQuotes". The first two quotes are from your SolarQuotes and Google listings; confirm the exact wording before publishing.

Why: a review that mentions a bill in credit is worth more than any percentage you can write yourself.

CURRENT FAQ (SAVINGS ANSWER)

Savings typically range from 50% to 100% of your electricity costs, depending on your system size and how you use energy. We'll calculate your potential savings based on your usage.

NEW HOMEPAGE FAQ

How much does a solar system cost in Albury-Wodonga?

A typical 6.6 kW home system with quality panels and inverter runs from around \$5,000 to \$8,000 after the federal STC discount. Batteries add \$8,000 to \$15,000 before the federal battery rebate. We quote from your bills, so you get a real number, not a range.

How much will I save?

Most households cut their bill by 50% to 80% with panels alone. Adding a battery usually pushes that higher because you use your own stored power in the evening instead of buying it back at peak rates. We'll estimate your figure from your actual usage before you commit.

How long until it pays for itself?

Usually 3 to 6 years for panels, longer for a battery. After that, the power is free for the remaining 20-plus years of the system's life.

What rebates can I get?

The federal STC discount on panels (everyone), the federal Cheaper Home Batteries discount (everyone, stepping down every six months), and the Solar Victoria panel rebate of up to \$1,400 (Victorian owner-occupiers under the income cap). We apply for all of them on your behalf.

Does solar work on cloudy days?

Yes, at reduced output. Panels don't generate at night, which is where a battery comes in: it stores your daytime surplus so you can run the house on it after dark.

Will solar add value to my home?

Buyers see a lower running cost, and most agents treat a quality system as a plus. The exact uplift varies, so we don't quote a figure.

Why: "100%" is gone, cost gets a real range, and the rebate question now exists. The cost figures are 2026 industry ranges; replace them with your own quote bands.

CURRENT CLOSING

Footer only: "Talk to an expert" and the phone number.

NEW FINAL CALL TO ACTION

Find out what your roof is worth.

Send us a recent bill or book a free site visit. You'll get a system design, an expected savings figure and a fixed-price quote. No pressure, no call centre.

Get my free quote

Call (02) 6021 2000

Why: the page ends by naming exactly what happens after the click.

HEADLINE OPTIONS

If you want to test the H1

OPTION	HEADLINE	WHEN TO USE IT
A · recommended	Cut your power bill by up to 80%.	Strongest match to search intent; compliant with the qualifier line.
B	Stop renting your electricity.	Emotional; pairs with the battery and independence story.
C	Solar and batteries that pay for themselves in 3 to 6 years.	For cautious buyers; no percentage to substantiate.
D	Albury-Wodonga's solar installers with their own electricians.	When differentiation matters more than savings, e.g. in ads.

Run A against C as the H1 for four weeks each and compare quote-form submissions.

HOUSEKEEPING

Fix while you're in Elementor

1. "Solar Made Simple" card: "from design, from installation to aftercare" has a duplicate "from".
2. FAQ page, EV answer starts "es. Solar can be used" (missing Y).
3. Rename the slug `/clean-energy-solutions-book-online/` to `/why-locals-choose-ces/` and redirect the old one.
4. Move `/heat-pumps/benefits-of-batteries/` to `/battery-systems/benefits-of-batteries/` and redirect.
5. Batteries page: the "times more energy 0" counter renders three times with no value. Remove or fill it.
6. Pick one experience figure. The hero says "three decades collective", the About says "30 years combined", the "Why Locals" page says "15-year track record".

SUBSTANTIATION NOTE

Keep this with your NETCC records

- **"Up to 80%":** a 6.6 kW system offsetting 70 to 85% of consumption for households with daytime usage or a battery; consistent with 2026 published figures (Zip Solar, Isolux, Green.com.au) and CES's existing FAQ range.
- **"\$1,200 to \$3,000 a year":** 2026 industry range for 6.6 kW solar-only (\$1,200 to \$2,000) plus battery uplift (\$800 to \$1,500). Set Solar, Stag Electrical, Ecogeneration.
- **"3 to 6 years payback":** Stag Electrical, CES FAQ, SolarQuotes guidance.
- **"Around 30% off a battery":** Cheaper Home Batteries Program (DCCEEW), launched 1 July 2025; rate reduced 1 May 2026, now steps down every six months.
- **"Up to \$1,400":** Solar Victoria panel rebate; income threshold reduced to \$150,000 from 1 July 2026.

Replace the industry figures with your own installed-customer averages once you have 12 months of monitoring data from 20 or more systems.
